Educația ca strategie a ieșirii din criză / The Education As a Strategy for Solving a Crisis

Abstract:

The paper entitled "The Education As A Strategy For Solving A Crisis" attempts to be a warning signal to the perils that urge the weakening of contemporary spiritual life. The issue of education in nowadays life, as a transition towards globalization, renders serious facts of survival, of getting acquainted with a new way of human coexistence on an ever smaller planet. The education belongs to the developmental policies in its entire image with great differences concerning the world civilization. Tiu education as civilization of the universal, unless targeted by accredited factors, becomes merely a utopia.
